S is an amino terminal signaling functional domain of parathyroid hormone (PTH); L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4)); B is a C-terminal binding portion of PTH(1-34) or a PTH-related protein (PTH-rP) (1-34); R_1 is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodeling, treating diseases and disorders associated with decreased tether1 activity, increasing cAMP in a mammalian cell having PTH-1 receptors, or screening for a peptide or inhalation unlike the large native PTH or PTH-P which avoids the need for regular injections to treat osteoporosis

linked to a carboxy-terminal binding portion of parathyroid treating mammalian conditions characterized by decreases in
                                                                                                         Claim 14;
                                                                                                        Fig 1; 119pp; English.
                                                                                                                       hormone for bone mass.
```

Compounds of the structure or formula S-(L)\_n-B, R-1-S-(L)\_n-R or S-(L)\_n-R, are new. S is an amino terminal signaling functional domain of parathyroid hormone (PPH), L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4)); B is a C-terminal binding portion of PPH(1-34) or a PTH-related protein (PPH-rP) (1-34); R 1 is the sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodeling, treating diseases and disorders associated with decreased tether1 activity, increasing cAMP in a mammalian cell having PTH-1 receptors, or screening for a peptide or inhalation unlike the large native PTH or PTH-P which avoids the need for regular injections to treat osteoporosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Compounds of the structure or formula S-(L) n-B, R 1-S-(L) n-R or S-(L) n-R, are new. S is an amino terminal signaling functional domain of parathyroid hormone (PTH); L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4)); B is a C-terminal binding portion of PTH(1-34) or a PTH-related protein (PTH-rP) (1-34); R 1 is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodeling, treating diseases and disorders associated with decreased tether1 activity, increasing cAMP in a mammalian cell having PTH-1 receptors, or screening for a peptide or non-peptide PTH (claimed). The new compound can be administered by inhalation unlike the large native PTH or PTHrP which avoids the need for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New compound comprising an amino terminal signaling functional domain linked to a carboxy-terminal binding portion of parathyroid hormone for treating mammalian conditions characterized by decreases in bone mass.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Linker; parathyroid hormone 1-37; PTH 1-37; streptavidin; fusion protein; recombinant production; endoproteinase LysC; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Synthetic oligonucleotide encoding linker and PTH 1-37.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        25-MAR-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence, which encodes a linker and the parathyroid hormone CC 1-37 (PTH 1-37) peptide with codon usage optimised for E. coli, was CC ligated to the 2.9 kb Nhel-HindIII fragment of pSAM-CORE, which contains CC the Met(13-139) streptavidin (SA) sequence, to give pSA-EK-PTH. pSA-EK-CC PTH and the LacIq repressor plasmid pUBS500 were used to transform E. CC coli K12 RM82. The transformants were grown, with IPTG induction, in CC medium containing kanamycin and amplicilin. Cells were harvested, lysed CC and isolated inclusion bodies solubilised in guanidine hydrochloride, and CC renatured by dilution in pH 7 phosphate buffer. The solution was CC clarified and the supernatant concentrated and purified on a column of CC immobilised iminobiotin. The purified material was incubated with CC endoproteinase LysC and the PTH 1-37 fragment released, recovered by SA CC fragment removal on an iminobiotin column followed by chromatography on a CC fractogel and reverse phase HPLC. The endoproteinase LysC cleaves the CC fusion protein rapidly and completely, exclusively at the Lys residue in CC the linker, i.e. nor ** Iva residue** in SA (Indated on 35.MM2-2001 **).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

The cassette comprises an operably linked nucleic acid sequence, where the expression of the cassette produces a tandem polypeptide that forms an inclusion body when expressed in a cell. The expression cassette is useful for producing peptide and polypeptide in a cell, preferably a tandem polypeptide that forms an inclusion body when expressed in a cell. The present sequence is that of a DNA sequence which encodes a polypeptide which may be produced using the expression cassette of the invention.
                                                                                                                                                                                           New expression cassette comprising an operably linked nucleic acid sequence, useful for producing a tandem polypeptide that forms an inclusion body when expressed in a cell.

                                                                                                                                                                                                                               The invention relates to a novel process for preparing recombinant human parathyroxin 1-34 peptide, including such steps as culturing a host cell in proper conditions, separating Gly-Ser-Pro-PrH 1-34 peptide (ADW14376), severing by Pro endopeptidase to form PTH 1-34 peptide (ADW14378) and separating by Pro endopeptidase to form PTH 1-34 peptide (ADW14378) and separating and purifying PTH 1-34 peptide. The present sequence encodes the PTH 1-34 peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              inclusion body when expressed in a a peptide which may be used in the of the invention.

                                                                                                                                                                                                                                                                                                                                       This invention relates to a novel expression cassette and methods for high yield production of polypeptides. The cassette comprises an operably linked nucleic acid sequence, where the expression of the cassette produces a tandem polypeptide that forms an inclusion body when expressed in a cell. The expression cassette is useful for producing peptide and polypeptide in a cell, preferably a tandem polypeptide that forms an inclusion body when expressed in a cell. The present sequence is that of a DNA sequence which encodes a polypeptide which may be produced using the expression cassette of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Harley S,

The expression cassette of the invention is useful for producing a peptide or polypeptide in a cell, preferably a tandem polypeptide that forms an inclusion body when expressed in a cell. The present DNA sequence encodes a peptide which may be used in the construction of a tandem polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          expression cassette; tandem polypeptide; inclusion body; inclusion body, fusion partner; PTH; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New expression cassette comprising an operably linked nucleic sequence, useful for producing a tandem polypeptide that forms inclusion body when expressed in a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             23-MAY-2003; 2003WO-US016645

The present sequence encodes the Gly-Ser-Pro-PTH 1-34 peptide.
                                                            New expression cassette comprising an operably linked nucleic a sequence, useful for producing a tandem polypeptide that forms inclusion body when expressed in a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Chen

                                                                                                                                                                                                                                                                                                                                                                                                                                                 70
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61
```

This invention relates to a novel expression cassette and methods high yield production of polypeptides. The cassette comprises an oplinked nucleic acid sequence, where the expression of the cassette produces a tandem polypeptide that forms an inclusion body when expression of the case to produce a tandem polypeptide that forms an inclusion body when expression of the case to the case the case to the case 
expressed operably 101

                                              A portion (AAT34865) of plasmid pBN1:PTH(1-34)C-1c comprises DNA coding for a fusion protein (AAR87867) composed of the C-terminal end of human carbonic anhydrase II joined by an intraconnecting peptide (including a thrombin cleavage site) to amino acids 1-34 of PTH (AAR98866), followed by a Cys residue and C-terminal sequence. The complete construct can be expressed in E. coli transformants. The intraconnecting peptide and C-terminal Cys residue enable the recombinant protein construct to be selectively reacted to produce C-terminal carboxamidated PTH(1-34)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             in a cell. The expression cassette is useful for producing peptide polypeptide in a cell, preferably a tandem polypeptide that forms inclusion body when expressed in a cell. The present sequence is the a DNA sequence which encodes a PTH peptide which was used in the exemplification of the invention.

                                                                                                                                                                                This invention relates to a novel expression cassette and methods for high yield production of polypeptides. The cassette comprises an operably linked nucleic acid sequence, where the expression of the cassette produces a tandem polypeptide that forms an inclusion body when expressed in a cell. The expression cassette is useful for producing peptide and polypeptide in a cell, preferably a tandem polypeptide that forms an inclusion body when expressed in a cell. The present sequence is that of a DNA sequence which encodes a polypeptide which may be produced using the expression cassette of the invention.
                                                                                                                                                                                                                                                                                                                                                       New expression cassette comprising an operably linked nucleic acid sequence, useful for producing a tandem polypeptide that forms an inclusion body when expressed in a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           expression cassette; tandem polypeptide;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention comprises an expression cassette which produces a tandem polypeptide that form an inclusion body when expressed in a cell. The expression cassette of the invention is useful for producing a peptide or polypeptide in a cell, preferably a tandem polypeptide that forms an inclusion body when expressed in a cell. The present DNA sequence encodes a protein which may be used in the construction of a tandem polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           expression cassette; tandem polypeptide; inclusion body; inclusion body fusion partner; PTH; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ADJ65859
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New expression cassette comprising an operably linked nucleic acid sequence, useful for producing a tandem polypeptide that forms an inclusion body when expressed in a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        06-MAY-2004

                                                                                                                                                                                                                                                         The invention comprises an expression cassette which produces a tandem polypeptide that form an inclusion body when expressed in a cell. The expression cassette of the invention is useful for producing a peptide or polypeptide in a cell, preferably a tandem polypeptide that forms an inclusion body when expressed in a cell. The present DNA sequence represents an expression cassette which encodes a tandem polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                  New expression cassette comprising an operably linked nucleic acid sequence, useful for producing a tandem polypeptide that forms an inclusion body when expressed in a cell.
                                                                                                                                                                                                                           Sequence 264 BP; 72 A; 67 C; 64 G; 61 T; 0 U; 0 Other;
